

Reducing the burden of medical record review and improving health outcomes with ECDS reporting

Published: Nov 1, 2021 - Administrative

The HEDIS® Electronic Clinical Data Systems (ECDS) reporting methodology encourages the exchange of the information needed to provide high-quality healthcare services.

The ECDS Reporting Standard provides a method to collect and report structured electronic clinical data for HEDIS quality measurement and improvement.

Benefits to providers:

- Reduced burden of medical record review for quality reporting
- Improved health outcomes and care quality due to greater insights for more specific patient-centered care

ECDS reporting is part of the National Committee for Quality Assurance (NCQA's) larger strategy to enable a Digital Quality System and is aligned with the industry's move to digital measures.

ECDS Measures

The first publicly reported measure using the HEDIS® Electronic Clinical Data System (ECDS) reporting standard is the **Prenatal Immunization Status (PRS)** measure. Health plans used the measure in HEDIS Measurement Year 2020 and reported the results in June 2021.

For HEDIS Measurement Year 2022, the following measures can be reported using ECDS:

- Childhood Immunization Status **CIS-E***
- Immunizations for Adolescents **IMA-E***

- Breast Cancer Screening **BCS-E**
- Colorectal Cancer Screening **COL-E**
- Follow-Up Care for Children Prescribed ADHD Medication **ADD-E**
- Metabolic Monitoring for Children and Adolescents on Antipsychotics **APM-E***
- Depression Screening and Follow-Up for Adolescents and Adults **DSF-E**
- Utilization of the PHQ-9 to Monitor Depression Symptoms for Adolescents and Adults **DMS-E**
- Depression Remission or Response for Adolescents and Adults **DRR-E**
- Unhealthy Alcohol Use Screening and Follow-Up **ASF-E**
- Adult Immunization Status **AIS-E**
- Prenatal Immunization Status **PRS-E** (Accreditation measure for 2021)
- Prenatal Depression Screening and Follow-Up **PND-E**
- Postpartum Depression Screening and Follow-Up **PDS-E**

Of note, NCQA added the ECDS reporting method to three existing HEDIS measures: Breast Cancer Screening, Colorectal Cancer Screening and Follow-up Care for Children Prescribed ADHD Medication. Initially, the ECDS method will be optional which provides health plans an opportunity to report using the ECDS method while transitioning to ECDS only in the future.

*Indicates that this is the first year that the measure can be reported using ECDS
